

Coilco

Induction Services

**COMPREHENSIVE SERVICE AND MAINTENANCE FOR THE
USERS OF INDUCTION HEATING AND MELTING FURNACES**

Induction furnace coil manufacture
Furnace removal and reinstallation
Furnace upgrade and modification
Induction coil repair and rewind
On-site service and breakdown repair

Welcome

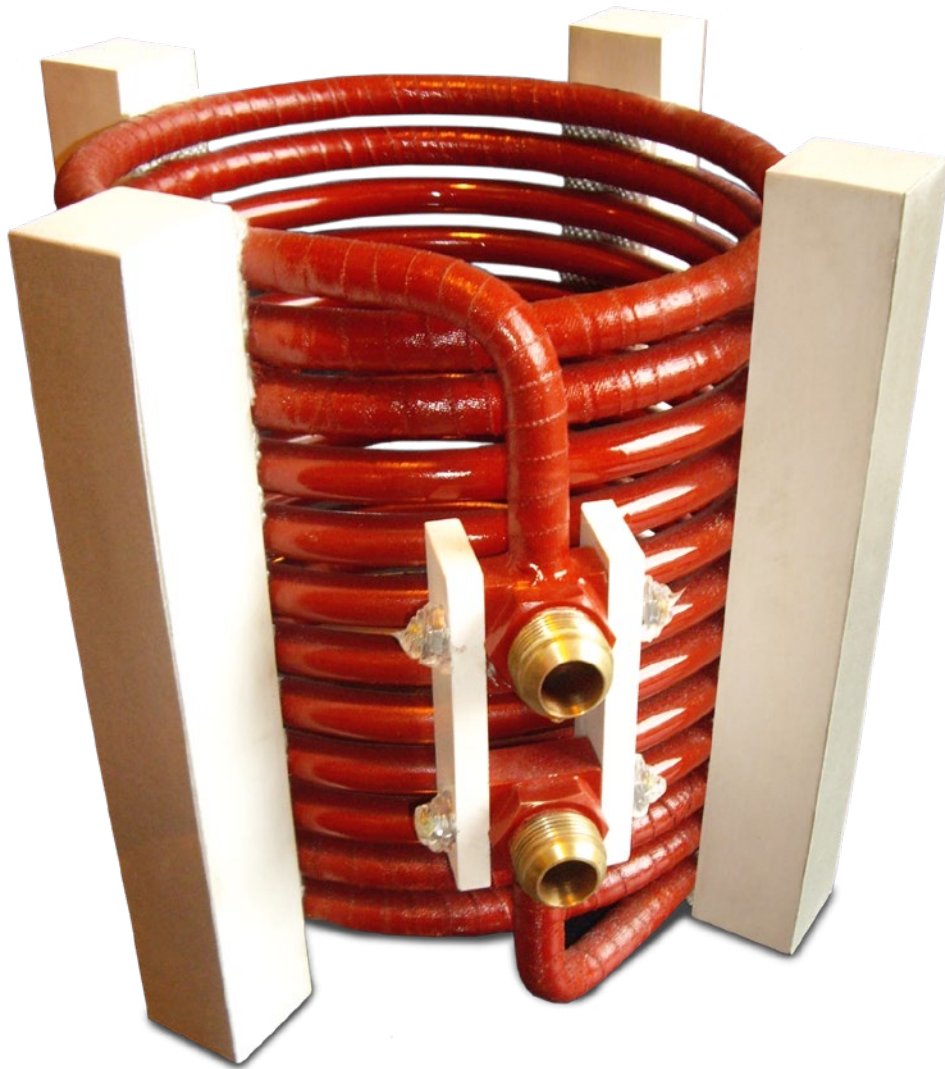

Coilco provide the highest quality installation and maintenance services for users of induction melting and heating equipment.

From our extensive facilities in the heart of the Midlands, our skilled engineers can provide an on-site breakdown service for all makes, types and sizes of induction furnace equipment; a comprehensive stock of the highest quality materials ensures a fast turnaround backed by the highest standards of workmanship and quality.

Installation, maintenance, upgrades, factory relocations, commissioning services and general engineering work are all part of Coilco's portfolio.

Induction furnace products

Coilco design and manufacture new coils and furnace assemblies. We are confident we can meet any customer specification.

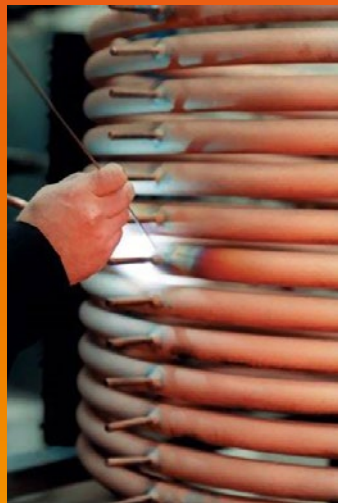

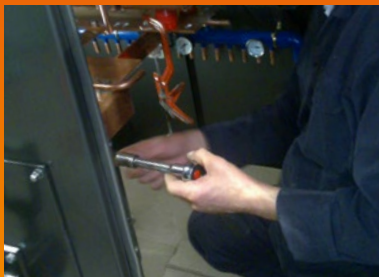

Our products include induction furnace coils, billet heaters, refractory blocks, bus bar systems, flexible power leads, channel furnace inductors, laminations, shunts, cable carriers, changeover switches, hydraulic systems, transformers, shading rings, earth shields and cooling systems. Our services cover the installation, upgrade, replacement, rebuilding or relocation of any type of induction heating equipment.

We are specialists in the design, manufacture and supply of coils for use with induction furnaces, billet heaters and high-frequency heating. Our sister company, Meltech, supply new and reconditioned inverters and furnace bodies.

Coilco are also agents for CEFI, global suppliers of induction heating and forging equipment.

Services

***Installation, maintenance,
repairs and upgrades***

At **Coilco** we offer a round-the-clock on-site service. Our engineers can provide an evaluation at any location in Europe, and can carry out new installations or maintain, repair or upgrade existing equipment. In the event of a breakdown, we carry with us an extensive range of tools and materials ensuring that any disruption is minimised.

Our extensive in-house facilities enable us to carry out the complete refurbishment of any induction furnace, restoring it to factory condition, including furnace bodies and rewinding coils to original specifications. As your requirements change, we can offer upgrades on any furnace equipment.

Coilco stock a wide range of spares that can be supplied quickly to your own in-house maintenance teams; these include dry resin packs, temperature switches, site glasses, heat exchangers, non-conductive hose and stainless steel clips, sleeving, oil sampling, earth leakage units, insulation material, cast tops and bases, capacitors, transformers, mains frequency switches, spare rails and replacement end boards.

We can also manufacture new coils of any design, shape or size. You can be assured that we only use the highest quality materials required within our industry.
